3.3	Specifying a region with a CloudFiles provider . . . . .	7
<b>4</b>	<b>Changelog</b>	<b>9</b>
<b>5</b>	<b>License</b>	<b>11</b>

File Syncer is a Python program which synchronized files from a local directory to one of the cloud object storage providers supported by Apache Libcloud.

Besides local <-> remote synchronization it also supports restoring files from the remote server to a local directory.

For more information and background, please see blog post titled [Hosting APT repository on Rackspace CloudFiles](#).

### Features

---

- Synchronize files from a local directory to one of the supported providers
- User can specify a list of filename patterns which are excluded
- User can specify to delete files in the container that do not exist locally
- Restore files from the remote server to a local directory
- All the operations (deletes, uploads and downloads) happen in parallel

---

## Installation

---

Latest stable version can be installed from PyPi using pip:

If you want to install latest development version, you can install it from this Git repository:

```
pip install -e git+https://github.com/Kami/python-file-syncer.git@master#egg=file_syncer
```

---

## Usage

---

```
file-syncer --help
```

### 3.1 Synchronizing files from a local directory to a remote server

```
file-syncer --username=<api username> --key=<api key or password> \  
  --provider=<libcloud provider constant - e.g. CLOUDFILES_US> \  
  --container-name=<target container name> \  
  --directory=<path to directory used to synchronize> \  
  --delete
```

### 3.2 Restoring files from the remote server to a local directory

```
file-syncer --username=<api username> --key=<api key or password> \  
  --restore \  
  --provider=<libcloud provider constant - e.g. CLOUDFILES_US> \  
  --container-name=<remote container name> \  
  --directory=<path to directory where the files will be restored to>
```

### 3.3 Specifying a region with a CloudFiles provider

```
file-syncer --username=<api username> --key=<api key or password> \  
  --provider=CLOUDFILES_US \  
  --region=ord \  
  --container-name=<target container name> \  
  --directory=<path to directory used to synchronize> \  
  --delete
```

---

**Changelog**

---

For changelog, please see the [CHANGES](#) file.

---

**License**

---

File syncer is distributed under the [Apache 2.0 license](#).
